What does "Retake Range" mean? The range is an estimate of your range of scores if you took other forms of the NPTE with different questions without additional preparation. Your average score could be as low as the lowest score in the range or as high as the highest score. If the highest number in the retake range is below 600, you should devote additional time studying those particular content areas.

Does a scale score of at least 600 within a Content Area or Body System mean that I passed that area? A 600 scale score within an area does not mean that you passed that area, since the NPTE is not delivered in Content Area or Body System sections. The scale scores are provided to help you see your relative performance in a given area, taking into account the difficulty of the questions for that area.

What does “On Track to Pass Score” mean? This is the number of items that you would likely need to get correct in a given area so that your score in that area would be at least 600. The difference between your score and the On Track to Pass Score will give you an idea of how much better you need to do in each area to achieve a 600 scale score in that area. You do not need a 600 in each Content Area to pass the test; you can make up for a lower score in one area with a higher score in another, but if you get a 600 in each area you will pass.

**How should I use the Scores by Body System portion of this report?** You can interpret these scores in the same way you interpreted the scores by Content Area. If the highest number in the retake range is below 600, you should devote additional time studying those particular body systems.

Scores by Section

</tbody>
</table>

**How should I interpret the information provided in the Scores by Section portion of this report?** The scores in this table may help you to determine if you lost concentration or experienced fatigue during the test. Scores by Section should be interpreted with some caution, since difficulty by section may vary slightly, but big differences between sections might suggest that your concentration or energy levels varied during the test.

**Example Questions**

- Cardiovascular/Pulmonary & Lymphatic Systems
- Musculoskeletal System
- Neuromuscular & Nervous Systems
- System Interactions
- Equipment & Devices
- Therapeutic Modalities
- Professional Responsibilities
NPTE-PT Test Content Outline, effective January 2013

This test is designed to measure whether or not an examinee has the requisite knowledge required of entry-level physical therapist practitioners. The focus is on the clinical application of knowledge, concepts, and principles necessary for the provision of safe and effective patient care. Provision of safe patient care includes consideration of current best evidence from clinically relevant research regarding the safety and efficacy of therapeutic, rehabilitative, and preventive physical therapy services.

Note that this blueprint covers important entry-level knowledge areas that are reasonably tested using well-constructed multiple-choice items. Some important areas are included because they cannot be adequately assessed in a multiple-choice format; other elements of the licensing process, are not specific to the scope of practice of physical therapists, or assess standards that might vary substantially across situations or practice locations. In addition, some important knowledge areas that are not linked to specific body systems and are not explicitly mentioned in the content outline (e.g., communications skills, teaching and learning techniques) are encompassed by multiple knowledge areas that are included in the content outline and are represented in test content to a greater extent than is apparent from this outline. Feedback on the candidates' performance will be provided for each knowledge area shown in boldface type. Percentages reflect the relative weights within knowledge areas.
Physical Therapy Examination. This category refers to knowledge of the types and applications of cardiovascular/pulmonary and lymphatic systems tests/measures, including outcome measures, according to current best evidence, and their relevance to information collected from the history and systems review. The category includes the reaction of the cardiovascular/pulmonary and lymphatic systems to tests/measures and the mechanics of body movement as related to the cardiovascular/pulmonary and lymphatic systems. Information covered in these areas supports appropriate and effective patient/client management for rehabilitation, health promotion, and performance across the lifespan.

- Cardiovascular/pulmonary systems tests/measures, including outcome measures, and their applications according to current best evidence
- Anatomy and physiology of the cardiovascular/pulmonary systems as related to tests/measures
- Movement analysis as related to the cardiovascular/pulmonary systems (e.g., rib cage excursion)

Foundations for Evaluation, Differential Diagnosis, & Prognosis. This category refers to the interpretation of knowledge about diseases/conditions of the cardiovascular/pulmonary and lymphatic systems according to current best evidence, in order to ensure appropriate and effective patient/client treatment and management decisions for rehabilitation, health promotion, and performance across the lifespan.

- Differential diagnoses related to diseases/conditions of the cardiovascular/pulmonary systems
- Differential diagnoses related to diseases/conditions of the lymphatic system
- Cardiovascular/pulmonary systems diseases/conditions and their pathophysiology to establish and carry out a plan of care, including prognosis
- Lymphatic system diseases/conditions and their pathophysiology to establish and carry out a plan of care, including prognosis
- Nonpharmacological medical management of the cardiovascular/pulmonary systems (e.g., diagnostic imaging, laboratory test values, other medical tests, surgical procedures)
- Pharmacological management of the cardiovascular/pulmonary systems
- Nonpharmacological medical management of the lymphatic system (e.g., diagnostic imaging, laboratory test values, other medical tests, surgical procedures)

Interventions. This category refers to cardiovascular/pulmonary and lymphatic systems interventions (including types, applications, responses, and potential complications) according to current best evidence, as well as the impact on the cardiovascular/pulmonary and lymphatic systems of interventions performed on other systems in order to support patient/client management for rehabilitation, health promotion, and performance across the lifespan.
• Cardiovascular/pulmonary systems physical therapy interventions and their applications for rehabilitation, health promotion, and performance according to current best evidence
• Anatomy and physiology of the cardiovascular/pulmonary systems as related to physical therapy interventions, daily activities, and environmental factors
• Secondary effects or complications from physical therapy and medical interventions on the cardiovascular/pulmonary systems
• Secondary effects or complications on the cardiovascular/pulmonary systems from physical therapy and medical interventions used on other systems
• Lymphatic system physical therapy interventions and their applications for rehabilitation, health promotion, and performance according to current best evidence
• Anatomy and physiology of the lymphatic system as related to physical therapy interventions, daily activities, and environmental factors
• Secondary effects or complications from physical therapy and medical interventions on the lymphatic system
• Secondary effects or complications on the lymphatic system from physical therapy and medical interventions used on other systems

MUSCULOSKELETAL SYSTEM

Physical Therapy Examination. This category refers to knowledge of the types and applications of musculoskeletal system tests/measures, including outcome measures, according to current best evidence, and their relevance to information collected from the history and systems review. The category includes the reaction of the musculoskeletal system to tests/measures and the mechanics of body movement as related to the musculoskeletal system. Information covered in these areas supports appropriate and effective patient/client management for rehabilitation, health promotion, and performance across the lifespan.

• Musculoskeletal system tests/measures, including outcome measures, and their applications according to current best evidence
• Anatomy and physiology of the musculoskeletal system as related to tests/measures
• Movement analysis as related to the musculoskeletal system
• Joint biomechanics and their applications
• Physical therapy ultrasound imaging of the musculoskeletal system

Foundations for Evaluation, Differential Diagnosis, & Prognosis. This category refers to the interpretation of knowledge about diseases/conditions of the musculoskeletal system, according to current best evidence, in order to ensure appropriate and effective patient/client treatment and management decisions for rehabilitation, health promotion, and performance across the lifespan.

• Differential diagnoses related to diseases/conditions of the muscular and skeletal systems
• Differential diagnoses related to diseases/conditions of the connective tissue
• Muscular and skeletal diseases/conditions and their pathophysiology to establish and carry out a plan of care, including prognosis
• Connective tissue diseases/conditions and their pathophysiology to establish and carry out a plan of care, including prognosis
- Nonpharmacological medical management of the musculoskeletal system (e.g., diagnostic imaging, laboratory test values, other medical tests, surgical procedures)
- Pharmacological management of the musculoskeletal system

**Interventions.** This category refers to musculoskeletal system interventions (including types, applications, responses, and potential complications), according to current best evidence, as well as the impact on the musculoskeletal system of interventions performed on other systems in order to support patient/client management for rehabilitation, health promotion, and performance across the lifespan.

- Musculoskeletal system physical therapy interventions and their applications for rehabilitation, health promotion, and performance according to current best evidence
- Anatomy and physiology of the musculoskeletal system as related to physical therapy interventions, daily activities, and environmental factors
- Secondary effects or complications from physical therapy and medical interventions on the musculoskeletal system
- Secondary effects or complications on the musculoskeletal system from physical therapy and medical interventions used on other systems

**NEUROMUSCULAR & NERVOUS SYSTEMS**

**Physical Therapy Examination.** This category refers to knowledge of the types and applications of neuromuscular/nervous systems tests/measures, including outcome measures, according to current best evidence, and their relevance to information collected from the history and systems review. The category includes the reaction of the neuromuscular/nervous systems to tests/measures and the mechanics of body movement as related to the neuromuscular/nervous systems. Information covered in these areas supports appropriate and effective patient/client management for rehabilitation, health promotion, and performance across the lifespan.

- Neuromuscular/nervous systems tests/measures, including outcome measures, and their applications according to current best evidence
- Anatomy and physiology of the neuromuscular/nervous systems as related to tests/measures
- Movement analysis as related to the neuromuscular/nervous systems

**Foundations for Evaluation, Differential Diagnosis, & Prognosis.** This category refers to the interpretation of knowledge about diseases/conditions of the neuromuscular/nervous systems, according to current best evidence, in order to ensure appropriate and effective patient/client treatment and management decisions for rehabilitation, health promotion, and performance across the lifespan.

- Differential diagnoses related to diseases/conditions of the neuromuscular/nervous systems (CNS, PNS, ANS)
- Neuromuscular/nervous systems (CNS, PNS, ANS) diseases/conditions and their pathophysiology to establish and carry out a plan of care, including prognosis
- Nonpharmacological medical management of the neuromuscular/nervous systems (e.g., diagnostic imaging, laboratory test values, other medical tests, surgical procedures)
- Pharmacological management of the neuromuscular/nervous systems
**Interventions.** This category refers to neuromuscular/nervous systems interventions (including types, applications, responses, and potential complications), according to current best evidence, as well as the impact on the neuromuscular/nervous systems of interventions performed on other systems in order to support patient/client management for rehabilitation, health promotion, and performance across the lifespan.

- Neuromuscular/nervous systems physical therapy interventions and their applications for rehabilitation, health promotion, and performance according to current best evidence
- Anatomy and physiology of the neuromuscular/nervous systems as related to physical therapy interventions, daily activities, and environmental factors
- Secondary effects or complications from physical therapy and medical interventions on the neuromuscular/nervous systems
- Secondary effects or complications on the neuromuscular/nervous systems from physical therapy and medical interventions used on other systems
- Motor control as related to neuromuscular/nervous systems physical therapy interventions
- Motor learning as related to neuromuscular/nervous systems physical therapy interventions

**INTEGUMENTARY SYSTEM**

**Physical Therapy Examination.** This category refers to knowledge of the types and applications of integumentary system tests/measures, including outcome measures, according to current best evidence, and their relevance to information collected from the history and systems review. The category includes the reaction of the integumentary system to tests/measures and the mechanics of body movement as related to the integumentary system. Information covered in these areas supports appropriate and effective patient/client management for rehabilitation, health promotion, and performance across the lifespan.

- Integumentary system tests/measures, including outcome measures, and their applications according to current best evidence
- Anatomy and physiology of the integumentary system as related to tests/measures
- Movement analysis as related to the integumentary system (e.g., friction, shear, pressure, and scar mobility)

**Foundations for Evaluation, Differential Diagnosis, & Prognosis.** This category refers to the interpretation of knowledge about diseases/conditions of the integumentary system, according to current best evidence, in order to ensure appropriate and effective patient/client treatment and management decisions for rehabilitation, health promotion, and performance across the lifespan.

- Differential diagnoses related to diseases/conditions of the integumentary system
- Integumentary system diseases/conditions and their pathophysiology to establish and carry out a plan of care, including prognosis
- Nonpharmacological medical management of the integumentary system (e.g., diagnostic imaging, laboratory test values, other medical tests, surgical procedures)
- Pharmacological management of the integumentary system

**Interventions.** This category refers to integumentary system interventions (including types, applications, responses, and potential complications), according to current best evidence, as well as the impact on
the integumentary system of interventions performed on other systems in order to support patient/client management for rehabilitation, health promotion, and performance across the lifespan.

- Integumentary system physical therapy interventions and their applications for rehabilitation, health promotion, and performance according to current best evidence
- Anatomy and physiology of the integumentary system as related to physical therapy interventions, daily activities, and environmental factors
- Secondary effects or complications from physical therapy and medical interventions on the integumentary system
- Secondary effects or complications on the integumentary system from physical therapy and medical interventions used on other systems

**METABOLIC & ENDOCRINE SYSTEMS**

**Foundations for Evaluation, Differential Diagnosis, & Prognosis.** This category refers to the interpretation of knowledge about diseases/conditions of the metabolic and endocrine systems, according to best current evidence, in order to ensure appropriate and effective patient/client treatment and management decisions for rehabilitation, health promotion, and performance across the lifespan.

- Differential diagnoses related to diseases/conditions of the metabolic and endocrine systems
- Metabolic and endocrine systems diseases/conditions and their pathophysiology to establish and carry out a plan of care, including prognosis
- Nonpharmacological medical management of the metabolic and endocrine systems (e.g., diagnostic imaging, laboratory test values, other medical tests, surgical procedures)
- Pharmacological management of the metabolic and endocrine systems

**Interventions.** This category refers to metabolic and endocrine systems interventions (including types, applications, responses, and potential complications), according to current best evidence, as well as the impact on the metabolic and endocrine systems of interventions performed on other systems in order to support patient/client management for rehabilitation, health promotion, and performance across the lifespan.

- Metabolic and endocrine systems physical therapy interventions and their applications for rehabilitation, health promotion, and performance according to current best evidence
- Anatomy and physiology of the metabolic and endocrine systems as related to physical therapy interventions, daily activities, and environmental factors
- Secondary effects or complications from physical therapy and medical interventions on the metabolic and endocrine systems
- Secondary effects or complications on the metabolic and endocrine systems from physical therapy and medical interventions used on other systems

**GASTROINTESTINAL SYSTEM**

**Foundations for Evaluation, Differential Diagnosis, & Prognosis.** This category refers to the interpretation of knowledge about diseases/conditions of the gastrointestinal system, according to
current best evidence, in order to ensure appropriate and effective patient/client treatment and management decisions for rehabilitation, health promotion, and performance across the lifespan.

- Gastrointestinal system diseases/conditions and their pathophysiology to establish and carry out a plan of care, including prognosis
- Differential diagnoses related to diseases/conditions of the gastrointestinal system
- Nonpharmacological medical management of the gastrointestinal system (e.g., diagnostic imaging, laboratory test values, other medical tests, surgical procedures)
- Pharmacological management of the gastrointestinal system

**Interventions.** This category refers to genitourinary system interventions (including types, applications, responses, and potential complications), according to current best evidence, as well as the impact on the genitourinary system of interventions performed on other systems in order to support patient/client management for rehabilitation, health promotion, and performance across the lifespan.

- Genitourinary system physical therapy interventions and their applications for rehabilitation and health promotion according to current best evidence (e.g., bladder programs, biofeedback, pelvic floor retraining)
- Anatomy and physiology of the genitourinary system as related to physical therapy interventions, daily activities, and environmental factors
- Secondary effects or complications from physical therapy and medical interventions on the genitourinary system
- Secondary effects or complications on the genitourinary system from physical therapy and medical interventions used on other systems

**GENITOURINARY SYSTEM**

**Physical Therapy Examination.** This category refers to knowledge of the types and applications of genitourinary system tests/measures, including outcome measures, according to current best evidence, and their relevance to information collected from the history and systems review. The category includes the reaction of the genitourinary system to tests/measures and the mechanics of body movement as related to the genitourinary system. Information covered in these areas supports appropriate and effective patient/client management for rehabilitation, health promotion, and performance across the lifespan.

- Genitourinary system tests/measures, including outcome measures, and their applications according to current best evidence
- Anatomy and physiology of the genitourinary system as related to tests/measures
- Physiological response of the genitourinary system to various types of tests/measures

**Foundations for Evaluation, Differential Diagnosis, & Prognosis.** This category refers to the interpretation of knowledge about diseases/conditions of the genitourinary system, according to current best evidence, in order to ensure appropriate and effective patient/client treatment and management decisions for rehabilitation, health promotion, and performance across the lifespan.

- Differential diagnoses related to diseases/conditions of the genitourinary system
- Genitourinary system diseases/conditions and their pathophysiology to establish and carry out a plan of care, including prognosis
• Nonpharmacological medical management of the genitourinary system (e.g., diagnostic imaging, laboratory test values, other medical tests, surgical procedures)
• Pharmacological management of the genitourinary system

**Interventions.** This category refers to genitourinary system interventions (including types, applications, responses, and potential complications), according to current best evidence, as well as the impact on the genitourinary system of interventions performed on other systems in order to support patient/client management for rehabilitation, health promotion, and performance across the lifespan.

• Genitourinary system physical therapy interventions and their applications for rehabilitation and health promotion according to current best evidence (e.g., bladder programs, biofeedback, pelvic floor retraining)
• Anatomy and physiology of the genitourinary system as related to physical therapy interventions, daily activities, and environmental factors
• Secondary effects or complications from physical therapy and medical interventions on the genitourinary system
• Secondary effects or complications on the genitourinary system from physical therapy and medical interventions used on other systems

**SYSTEM INTERACTIONS**

**Foundations for Evaluation, Differential Diagnosis, & Prognosis.** This category refers to the interpretation of knowledge about system interactions, according to current best evidence, in order to ensure appropriate and effective patient/client treatment and management decisions for rehabilitation, health promotion, and performance across the lifespan.

• Differential diagnoses related to diseases/conditions where the primary impact is on more than one system
• Diseases/conditions where the primary impact is on more than one system to establish and carry out a plan of care, including prognosis
• Impact of comorbidities/coexisting conditions on patient/client management (e.g., diabetes and hypertension, obesity and arthritis, hip fracture and dementia)
• Psychological and psychiatric conditions that impact patient/client management (e.g., depression, schizophrenia)
• Nonpharmacological medical management of multiple systems (e.g., diagnostic imaging and other medical tests, surgical procedures)
• Pharmacological management of multiple systems, including polypharmacy

**EQUIPMENT & DEVICES**

This category refers to the different types of equipment and devices, use requirements, and/or contextual determinants, as well as any other influencing factors involved in the selection and application of equipment and devices, including consideration of current best evidence, in order to support patient/client treatment and management decisions for rehabilitation, health promotion, and performance across the lifespan.

• Assistive and adaptive devices
• Prosthetic devices
• Protective, supportive, and orthotic devices
THERAPEUTIC MODALITIES
This category refers to the underlying principles for the use of therapeutic modalities as well as the justification for the selection and use of various types of therapeutic modalities, including consideration of current best evidence, in order to support patient/client treatment and management decisions for rehabilitation, health promotion, and performance across the lifespan.

- Thermal modalities
- Iontophoresis
- Electrotherapy modalities, excluding iontophoresis
- Phonophoresis
- Ultrasound modalities, excluding phonophoresis
- Mechanical modalities (e.g., mechanical motion devices, traction devices)
- Biofeedback
- Electromagnetic radiation (e.g., diathermy)
- Pneumatic compression modalities

SAFETY & PROTECTION
This category refers to the critical issues involved in patient/client safety and protection and the responsibilities of health-care providers to ensure that patient/client management and health-care decisions take place in a secure environment.

- Factors influencing safety and injury prevention
- Function, implications, and precautions related to intravenous lines, tubes, catheters, and monitoring devices
- Emergency preparedness (e.g., CPR, first aid, disaster response)
- Infection control procedures (e.g., standard/universal precautions, isolation techniques, sterile technique)
- Signs/symptoms of physical, sexual, and psychological abuse and neglect

PROFESSIONAL RESPONSIBILITIES
This category refers to the responsibilities of health-care providers to ensure that patient/client management and health-care decisions take place in a trustworthy environment.

- Standards of documentation
- Patient/client rights (e.g., ADA, IDEA, HIPAA)
- Human resource legal issues (e.g., OSHA, sexual harassment)
- Roles and responsibilities of physical therapist assistants in relation to physical therapists and other health-care professionals
- Roles and responsibilities of other health-care professionals and support staff

RESEARCH & EVIDENCE-BASED PRACTICE
This category refers to the application of measurement principles and research methods to make reasoned and appropriate assessment and to the interpretation of information sources and practice research to support patient/client management decisions fundamental to evidence-based practice.

- Research design and interpretation (e.g., qualitative, quantitative, hierarchy of evidence)
• Measurement science (e.g., reliability, validity)
• Statistics (e.g., t-test, chi-square, correlation coefficient, ANOVA, likelihood ratio)
• Data collection techniques (e.g., surveys, direct observation)
